

Amendments to the Specification:

Please amend the specification by replacing paragraph [00015] on page 4 with the following paragraph:

[00015] The ~~different~~ difference of the fractions EPDM 1 and EPDM 2 may be due, for example, to appropriate additives contained in the fractions or to appropriate choice of the quantity ratios of the monomers ethylene, propylene and/or diene on which the EPDM terpolymer is based. Another possibility of controlling the viscosity consists of varying the diene on which EPDM is based.
